Sudden Unexplained Death in Childhood

an affiliate of the SUDC Foundation

Sudden Unexplained Death in Childhood (SUDC) is the sudden and unexpected death of a child between 1 and 18 years of age, which remains unexplained after a thorough investigation is conducted. 40 children in England and Wales die every year without reason. As the 5th leading category of death in children aged 1-4 years, SUDC is one of the most under-recognised medical tragedies of our time. SUDC UK is dedicated to raising awareness and funding research to make SUDC predictable and preventable.
